

# JOSHUA HANIF

SOFTWARE ENGINEER

Tel: 519-716-4548 Email: hanifjoshua1@gmail.com LinkedIn: linkedin.com/in/joshua-hanif Portfolio:  
jhaniff.github.io/Portfolio

## Education

### York University

*B.Eng., Honours Software Engineering*

September 2020 – December 2025

*Toronto, Ontario*

### Relevant Coursework

- Data Structures & Algorithms
- Database Design
- User Interfaces
- Software Design
- Operating Systems
- Object-Oriented Programming

## Technical Skills

**Testing & QA Tools:** Selenium, Appium, Playwright, Cypress, JUnit, TestNG, Jira, qTest, Zephyr, TestRail

**Languages:** Java, JavaScript, TypeScript, Python, C/C++, SQL, Bash, Swift, HTML/CSS

**Frameworks & Platforms:** React (React Native), NextJS, ExpressJS, NodeJS, Flask, SwiftUI, Redis, PostgreSQL, Docker, Jenkins, Git, Linux

## Experience

### IBM

June 2026 – Present

*Software QA Engineer*

*Bedford, Nova Scotia*

- Selected for IBM's Quality Engineering track at its Client Innovation Center, completing a rigorous onboarding curriculum covering the software testing lifecycle, test case design, defect management, and Agile/Scrum QA methodologies.
- Earned the **ISTQB** Certified Tester certification and completed additional IBM coursework in software quality assurance, building a strong foundation in industry-standard testing practices.
- Developing hands-on proficiency with enterprise QA tooling and processes ahead of assignment to client engagements.

### Blaise Transit

January 2026 – May 2026

*Software QA Analyst Intern*

*Montreal, Quebec*

- Designed and built a test automation framework in **TypeScript** using **Playwright** and **Appium** to validate critical dispatching algorithms and core user flows, cutting manual regression testing time by 90%.
- Developed the technical roadmap for iOS and Android testing with **Appium**, identifying key blockers such as iOS provisioning and React Native selector limitations, and defining mitigation strategies for the engineering team.
- Solved test data isolation issues in a shared staging environment by implementing dynamic user namespacing and automated API cleanup scripts.
- Authored a Test Plan establishing a three-tier (Dev/Staging/Prod) testing strategy to protect production data integrity.

### Johnson Controls

June 2022 – September 2023

*Software Automation Developer (Co-Op)*

*Toronto, Ontario*

- Designed and implemented an end-to-end test automation framework in **Java** using **Selenium**, **Appium**, and **TestNG**, reducing flaky test failures by 30%.
- Built and maintained **Jenkins** CI pipelines to automate integration, test execution, and reporting, streamlining the overall QA workflow.
- Debugged and optimized existing pipelines, and championed the addition of new automated test cases to broaden regression coverage.
- Led feature testing across security system devices, web portals, and **Android** apps, writing Java test cases that validated end-to-end functionality.
- Built an **Appium** automation framework for the **Flutter**-based iOS Installer App, cutting manual testing time and ensuring a consistent user experience.

## Projects

### yuMeet Social App | JavaScript, TypeScript, React Native, PostgreSQL, Redis, ExpressJS, NodeJS | 2025

- Released a cross-platform social networking app for university students, published on the App Store and Google Play.
- Architected the backend using a microservices approach and deployed the full stack with Docker on DigitalOcean Kubernetes, using CI/CD pipelines for automated builds and releases.
- Integrated Redis as an in-memory cache to accelerate retrieval of messages and session data, improving response times by ~40%.
- Implemented real-time messaging with WebSockets and **BullMQ**, and designed secure, JWT-authenticated RESTful APIs for user profiles, messaging, and events.
