EDUCATION

York University

B.Eng., Honours Software Engineering

September 2020 – December 2025

Toronto, Ontario

RELEVANT COURSEWORK

- Data Structures
- Algorithms Analysis
- Software Design
- Database Design
- User Interfaces
- OOP
- Operating Systems

TECHNICAL SKILLS

Languages: C/C++, Java, JavaScript, TypeScript, Python, MATLAB, Bash, Visual Basic, Verilog, Swift, SQL, HTML/CSS

Developer Tools: VS Code, Eclipse, IntelliJ IDEA, PyCharm, Xcode, Android Studio

Technologies/Frameworks: React (React Native), Flask, ExpressJS, NextJS, SwiftUI, Tailwind CSS, Firebase, Figma, Appium, NodeJS, Selenium, Cypress, JUnit, TestNG, BullMQ, Redis, PostgreSQL, Docker, Jenkins, DigitalOcean, Maven, Gradle, Git (GitKraken), Linux, Jira, qTest, Zephyr

EXPERIENCE

Johnson Controls

June 2022 – September 2023

Software Automation Developer (Co-Op)

Toronto, Ontario

- Designed and implemented an end-to-end **Selenium** + **Appium** + **TestNG** framework in **Java**, reducing flaky test failures by 30%.
- Authored **XML**-based test scripts to automate daily regression suites against new builds, increasing test coverage and reliability.
- Created and maintained **Jenkins** pipelines that automated code integration, test execution, and report generation, optimizing the QA workflow and improving team productivity.
- Debugged and optimized existing pipelines; championed the addition of new automated test cases to broaden regression coverage.
- Developed a **Cypress**-based suite for automating the web user portal, leading to faster feedback cycles and higher test stability.
- Led feature testing for security system devices, web portals and **Android** apps, writing Java test cases that ensured end-to-end functionality.
- Built a **Appium** framework for the **Flutter iOS Installer App**, significantly reducing manual testing time and ensuring a consistent user experience.

PROJECTS

yuMeet Social App | *JavaScript, TypeScript, React Native, Tailwind CSS, PostgreSQL, Redis, ExpressJS, NodeJS* | 2025

- Released a cross-platform social networking app (iOS and Android) for university students; available on the App Store and Google Play
- Architected the backend as microservices, enabling clear separation of concerns and easier scalability
- Integrated Redis as an in-memory cache to accelerate message retrieval and user session data—improving response times by ~40%
- Built real-time messaging using WebSockets; used BullMQ for asynchronous notification delivery
- Designed and implemented RESTful APIs (ExpressJS) for user authentication, profiles, messaging, and events; secured endpoints with JWT
- Styled the React Native front end with Tailwind CSS for a responsive, consistent UI across devices
- Deployed the entire stack on DigitalOcean Kubernetes, using Docker containers and CI/CD pipelines for automated builds

SalonAI | *NextJS, Flask, Python, LLaMA, PostgreSQL, Redis, Docker* | 2025

- Engineered an AI-driven recommendation engine by fine-tuning a LLaMA model to provide personalized hairstyle and color suggestions, logging outputs for stylist review and future reference
- Developed an automated scheduling and booking system using Flask RESTful APIs, enabling real-time availability checking, conflict resolution, and instant appointment confirmations
- Architected and containerized the full-stack platform: NextJS for SEO-optimized SSR/SSG web front end and Flask back end -deployed via Docker for scalable orchestration
- Integrated PostgreSQL with Redis caching to accelerate data retrieval and AI query performance, reducing response times and ensuring a seamless user experience
